Consent/Authorization Snippet

We have received permission to conduct limited security testing on the specified assets as part of an academic project. All activities comply with the Rules of Engagement and have been preapproved by the stakeholders.

Stop-test trigger: Any indication of production impact, unexpected system behavior, or unauthorized data access will immediately halt testing and notify all parties.

Reflection

One trade off we'd revisit is the decision to prioritize scope over depth. While we covered more assets, this limited our ability to conduct deeper, more meaningful tests on critical targets. In future engagements, narrowing the scope could yield more actionable insights with less noise.
